

Uniden®

Programming Services

Would you like your TrunkTracker series scanner professionally programmed specifically for your area? If you purchased your scanner from a dealer who specializes in radio sales, please check with them to see if they offer a programming service. Otherwise the Uniden Scanner Programming Service can help! We can program your new scanner with the public safety agencies in your community and county and, if you wish, outlying areas as well. Just fill out the back side of this form and ship your scanner to us.

If you own a HomePatrol series scanner (the Uniden-Bearcat 436HP, 536HP, HomePatrol II, SDS Series), we can also help. And you don't need to send us your radio. We will program a custom Favorites List for you on a new, high capacity SD Card with targeted channels for your area which will make scanning far easier and faster than ever before. You'll also get the most up-to-date frequency database for the USA and Canada and the latest firmware update for the scanner. We'll ship your new SD card and you simply swap out, but keep, the old card. To order your SD card upgrade, go online to www.unidenprogramming.com, or fill out and mail in this form or you can call us at 1-888-488-2869 Monday-Friday 10-4 Eastern.

We also offer DMR, NXDN, ProVoice and Extreme upgrade services. Call or see the website.

TrunkTracker Series

BCT15X
BCD325P2
